

Morrow Requests

One shared place for incoming work

Keep every request with its owner, decision history and next action.

Abdullah Alsmaeel
AI-assisted original work
September 2026

Synthetic concept only. No client, customer, or measured-result claim.

Requests move through too many places

Illustrative workflow for a fictional operations team.

Where a request starts	What gets lost	Illustrative consequence
Shared inbox	Owner and next step	A request waits for a manual follow-up
Chat thread	Decision context	The team repeats a question
Spreadsheet	Current status	A handoff uses an older version

The product concept keeps one request record with its owner, context, and current state.

Follow-up work in two illustrative scenarios

Fictional weekly action counts for a design demonstration.

Reading the chart

Status checks take the largest share of modeled follow-up work.

Current workflow: 39 actions per week.
Shared-queue scenario: 16 actions per week.

A pilot for one operations team

Illustrative scope for Morrow Requests.

01

Request intake

Capture a request, assign an owner, and show the next action.

02

Shared status

Show one current state and keep the decision history beside it.

Pilot review

Review a small set of buyer requests, then decide whether the workflow and layout fit the team.
